LED Lighting

Lighting Options: Both lighting options include transformers, interior valences, and wiring.

LED Puck: Pricing is based per puck light and total puck light counts are based on final layout / design. Spacing of puck lights are designed so that they will provide even light across the run of wall units to the worksurface underneath.

Linear LED: Pricing is based per wall unit to be featured in as light runs the length the bottom of each unit. Sizing is based on overall length of unit. Lights do not span between wall units, but do provide even light across the worksurface.
